

## Are you thinking about moving your IT workload to the Cloud but have concerns about Security and Availability of your data and applications?

MDX-i's Infrastructure as a Service (IaaS), built on market leading cloud platforms, leverages management tools and an enterprise grade infrastructure to provide a private and secure cloud environment for your IT workload, which is accessible via a protected VPN connection to our world class Data Center.

Create, Manage and use "Virtual Data Centers" on MDX-i cloud platforms, utilizing subscribed Virtual Resource Pools (VRP), which consist of vCPU, Memory, Storage, Network and Security, as an extension of traditional on-premise IT data center

### Features

Enterprise Class Infrastructure  
Compute (vCPU & Memory)  
Load Balancers  
Dedicated Security

Secure VPN Access  
Customized Connectivity  
24/7/365 MDX-I GNOC Support  
EMC Enterprise Hybrid Cloud

Microsoft Cloud OS  
Create/Manage Virtual Data centers  
Self-Management Portal  
Scalable Platform

### Benefits

**Transfer Capex to Opex:** Manage IT Spend to your advantage.

**Efficiency:** Only pay for what you use.

**Infrastructure Resilience:** 99.95% Service availability guaranteed.

**Security:** Secure VPNs and IPS ensure higher levels of security than on premise.

**Built-in Certification:** Hosted in MDX-i Uptime-Institute-Certified Tier III Data Centre, with PCI-DSS, ISO27001 and ISO9001 certification.

**Increased Productivity:** Browser and BYOD access increases productivity.

**Simplified Integration/Migration:** Enterprise Class VMware tools simplify migration and integration

**Agility:** Reduced deployment time for infrastructure and complete IT services.

**Compliance:** Meet Regulatory-compliance, security and audit policy requirements
